THE STEEL BAR AND STAPLE OF THE HASP SHOULD BE CASE HARDENED AS IS THE PADLOCK SHACKLE. RECESSED SCREWS SHOULD BE CONCEALED WHEN THE HASP IS CLOSED.

EXAMPLE OF BARS AND GRILLWORK

## ALARM TYPES

The classification of business determines which alarm system, if any, is required to protect the premises. Classification of the business is determined by the highest classification of merchandise inventoried or held for sale. Any required alarm system must protect all the exterior doors and accessible openings (including storefront display windows and unbarred skylights). This is in addition to the required locking devices and hinges. If no alarm system is required, the insured may elect to use a combination of alarm protection and physical barriers.

### CODE

The four types of alarm systems required to protect the premises are described as follows:

- 0 None Required
- 1 **Central Station, Supervised Service Alarm System** - A silent alarm that is constantly in operation, which signals upon any breach of a door, window (including storefront windows and unbarred skylights), or other accessible opening to the protected premises, at a private sentry or guard headquarters that is attended and monitored twenty-four (24) hours a day, that dispatches guards to the protected premises immediately upon the activation of the alarm, that periodically checks the operation and effectiveness of the system, and that notifies law enforcement authorities as soon as any breach of the premises is confirmed.
- 2 **Central Station, Supervised Alarm System (Without Guard Dispatch)** - A silent alarm that is constantly in operation, which signals upon any breach of a door, window (including storefront windows and unbarred skylights), or other accessible opening to the protected premises, at an office of the law enforcement authorities or at an office of an independent agency located at a distance from the protected property, which has trained operators continually on duty twenty-four (24) hours a day to receive signals and to notify law enforcement authorities as soon as any breach of the premises is confirmed.
- 3 **Silent Alarm System** - An alarm system that signals at a location other than the location where it is installed upon any breach of a door, window (including storefront windows and unbarred skylights), or other accessible opening to the protected premises.
- 4 **Local Alarm System** - An alarm system that signals loudly at the premises by means of one or more tamper-protected sounding devices upon any breach of a door, window (including storefront windows and unbarred skylights), or other accessible opening to the protected premises.

**NOTE:** If either of the central station alarm systems specified is not available in the community in which the premises are located, a silent alarm shall be permitted.
